RE: PETROLEUM CONTAMINATION AT CVH, BERLIN, VT
(SITE #92-1292)

Dear Mr. Schwer,

I believe there is a misunderstanding regarding the amount of contaminated soil stored on site. Your letter dated September 4, 1992 indicates 1,500 cubic yards of contaminated soil is stored on site, whereas the actual amount is 60 cubic yards (see attached Bills of Lading completed by Lee's Oil Service). Bob Nichols of Dubois and King had previously estimated 10 cubic yards.

The contaminated soil was removed by Lee's Oil Service on November 5, 1992 and has been transported to AmRec of Bath, NH, Inc. for disposal.

If you have any questions please call me at 229-9121, ext. 161.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joseph W. Kaczmarek'.

RE: Petroleum contamination at Central Vermont Medical Center in Barre (Site #92-
~~1282~~
1284)

Dear Mr. Kaczmarek:

The Sites Management Section (SMS) has reviewed the tank pull form and accompanying memorandum by Dubois & King, Inc. regarding the removal of two underground storage tanks from the above referenced site. The tanks were removed on August 5, 1992.

Approximately ten cubic yards of oil contaminated soil resulting from an explosion prior to the tank removal were stockpiled onsite. An additional 1500 cubic yards of contaminated soil was stockpiled as well, resulting from the excavation of the USTs. The contamination of the soils was minimal, as evidenced by low photoionization readings, which reached a peak of eight parts per million.

Based on the above, the SMS is requesting the Central Vermont Medical Center to retain the services of a qualified consultant to develop a treatment and/or monitoring plan to deal with the contaminated stockpiled soils. One method of dealing with soils contaminated with #6 fuel oil is onsite landfarming. Please review the enclosed Hazardous Materials Management Division Protocols for Landfarming Petroleum Contaminated Soil and determine if the Central Vermont Medical Center is able to utilize this option.

Please have your consultant submit to the SMS a preliminary work plan which responds to the above requests within fifteen days of your receipt of this letter so that it may be approved prior to the initiation of onsite work. If you have any questions, feel free to call.

Sincerely,

Charles B. Schwer, Supervisor
Sites Management Section
